PROFESSIONAL SUMMARY

Network & Cloud Engineer with 9+ years of engineering and enterprise infrastructure experience across networking, systems and cloud environments. AWS Certified Solutions Architect with hands-on experience designing and supporting secure, scalable and highly available AWS solutions, backed by practical experience in network administration, infrastructure support and technical troubleshooting.

Experienced in enterprise networking across TCP/IP, DNS, DHCP, subnetting, routing, switching, VLANs and PoE, with a strong understanding of AWS networking through VPC, subnets, route tables, security groups, NACLs, IAM and load balancing. Also skilled in Linux, Windows, Terraform, Git and CI/CD, with practical cloud projects spanning IoT, serverless and data analytics.

Combining hands-on engineering and network infrastructure experience with AWS cloud architecture knowledge, I bring a practical approach to designing, supporting and troubleshooting secure, reliable and scalable technology environments.

CORE TECHNICAL SKILLS

Cloud & AWS: AWS, EC2, VPC, IAM, S3, Lambda, RDS, DynamoDB, CloudFormation, CloudWatch, API Gateway, Route 53, ELB, Auto Scaling, AWS IoT Core, Glue, Athena, Quick Sight, SNS, SQS

Networking: TCP/IP, IPv4, IP Addressing, DNS, DHCP, CIDR, Subnetting, VLANs, Routing, Switching, Route Tables, Internet Gateway, NAT Gateway, Security Groups, Network ACLs, VPN, PoE, Network Administration, Network Management, Network Troubleshooting, Cisco Networking, Direct Connect (Knowledge)

Infrastructure & Systems: Linux, Windows Server, Active Directory, Microsoft 365, Enterprise Infrastructure, Network-Connected Systems, System Deployment, Infrastructure Troubleshooting, Technical Documentation

DevOps & Automation: Terraform, CI/CD, Git, GitHub, GitHub Actions, Bash, Python, Docker (Foundational)

Tools & Platforms: VS Code, Jupyter, PowerShell, SQL

PROFESSIONAL EXPERIENCE

Cloud & Network Solutions Architect – Mentor

*Optimal-IT**October 2024 – Present*

Provide cloud and networking architecture mentoring and technical guidance to AWS Academy students, supporting the design, deployment and optimisation of secure, scalable AWS solutions through hands-on labs and project-based learning.

Key Contributions

- Mentor students in AWS architecture, cloud networking, security and serverless application development using AWS best practices.
- Teach and apply fundamental networking concepts including TCP/IP, IP addressing, subnetting, CIDR, DNS, DHCP, routing, network security and connectivity.
- Design and review AWS network architectures using Amazon VPC, subnets, route tables, Internet Gateway, NAT Gateway, Security Groups and Network ACLs.
- Design and review cloud solutions leveraging Amazon EC2, VPC, IAM, Lambda, API Gateway, RDS, DynamoDB, CloudFormation and CloudWatch.
- Guide learners in understanding how traditional networking principles translate into AWS cloud networking and infrastructure design.
- Guide learners in implementing highly available, fault-tolerant and cost-optimised cloud architectures aligned with the AWS Well-Architected Framework.
- Support troubleshooting of network connectivity, cloud infrastructure and application deployment issues across practical AWS projects.
- Conduct architecture reviews and provide technical guidance on secure communication between cloud resources and external networks.
- Contribute to the development of real-world cloud and networking laboratories, solution architecture exercises and technical learning materials.

Achievements

- Delivered 500+ hours of hands-on AWS cloud laboratories, networking exercises and technical mentoring.
- AWS Certified Solutions Architect – Associate.
- Practical experience designing cloud solutions for web applications, serverless architectures, IoT and data analytics workloads.
- Developed practical understanding of AWS cloud networking and how enterprise networking principles are applied within cloud environments.

Service Engineer – Networking & Technology Infrastructure

*Johnson Controls**September 2025 – Present*

Support enterprise retail technology infrastructure across multiple UK customer sites, with responsibilities spanning network administration, network management, installation, commissioning, maintenance and technical support for network-connected systems.

Key Responsibilities & Achievements

- Configure, deploy, administer and support enterprise IP-based technology infrastructure across distributed customer environments.
- Perform network administration and management activities involving IP addressing, TCP/IP, DHCP, Ethernet, PoE and network-connected devices.

- Troubleshoot network connectivity, hardware and system faults using structured diagnostic and root-cause analysis techniques.
- Support and troubleshoot Cisco-based network architecture and connected infrastructure, including network switches, Ethernet connectivity and PoE environments.
- Apply networking principles including VLANs, IP addressing, subnetting, DHCP, DNS and routing when diagnosing and configuring network-connected systems.
- Configure and support network-connected devices within enterprise customer environments, ensuring reliable communication between systems and network infrastructure.
- Perform installation, configuration, commissioning and preventative maintenance of enterprise technology and network infrastructure.
- Analyse network and system faults across distributed sites and implement corrective actions to restore service availability.
- Collaborate with customers, network engineers, project teams and field engineers during infrastructure deployments, upgrades and fault resolution.
- Produce technical documentation, commissioning reports, network/system configuration records and customer handover documentation.
- Manage multiple technical incidents and priorities across geographically dispersed sites while maintaining service availability and meeting SLA requirements.

Systems & Network Engineer

Diro Systems

September 2022 – May 2025

Provided systems, network and infrastructure support across enterprise IT environments, maintaining reliable connectivity, user services and business-critical technology platforms. Responsible for network administration, systems troubleshooting, Microsoft infrastructure, Linux environments and day-to-day IT operations.

Key Responsibilities & Achievements

- Administered and supported enterprise network and IT infrastructure, ensuring reliable connectivity and availability of business services.
- Configured and troubleshoot TCP/IP, IP addressing, DNS, DHCP, network connectivity and endpoint communication issues.
- Supported network administration and management, including switches, routers, network-connected devices and user endpoints.
- Diagnosed and resolved infrastructure, hardware, software and connectivity incidents using structured troubleshooting and root-cause analysis.
- Supported Windows and Linux environments, including system configuration, maintenance, updates and troubleshooting.
- Administered Microsoft 365 services, user accounts and access, supporting business users and maintaining secure access to corporate resources.
- Supported Active Directory environments, including user administration, access management and troubleshooting of authentication and connectivity issues.
- Monitored and maintained IT infrastructure to identify potential faults and minimise service disruption.
- Provided first- and second-line technical support, resolving approximately 95% of assigned incidents within 24 hours.
- Supported server, workstation and network infrastructure maintenance across the organisation.
- Assisted with infrastructure upgrades, technology deployments and technical projects from implementation through to operational support.

Project Engineer – Security & Network Systems

Servo Direct Ltd

May 2016 – Aug 2022

- Delivered and configured 120+ CCTV, security and network-connected systems, achieving 98% on-time project delivery.
- Conducted site surveys, network planning and system design to support reliable security infrastructure deployments.
- Installed, configured and troubleshoot IP-based CCTV, networking equipment, cabling and connected security systems.
- Integrated intrusion detection and CCTV systems to deliver integrated security solutions.
- Coordinated technical teams and subcontractors to meet project milestones, quality and client requirements.
- Provided technical support, fault diagnosis and system performance reporting, maintaining 99.2% uptime.

CERTIFICATIONS

AWS Certified Solutions Architect – Associate 2026

AWS Certified Cloud Practitioner 2026

EDUCATION

Degree	University	Year
MSc Electronics and Information technology	University of South Wales	2023
B. Eng. Electrical / Electronic Engineering	Igbinedion University Okada	2013
Electrotechnical certification scheme	ECS CARD	2026
